

## COLLE TOWING ADMINISTRATION BUILDING

Compton Engineering is the Project Engineer and Project Architect for Mr. John Colle's office building located on the East Pascagoula River, just north of Northrop Grumman Ship Systems facility. The facility is unique in that it was constructed utilizing the existing structure from the two-story building damaged by Hurricane Katrina. Compton Engineering was able to design a functional plan around the existing conventionally framed structure. The design included a now one-story facility located in a velocity zone and meeting the City building code requirements of 150 mph wind loads. The area below the facility provides a covered parking area and entrance for employees.
